Dekton Use, Care & Maintenance Guide

General Usage Advice

Normal Maintenance

Due to Dekton's practically zero porosity, the ultra-compact surface is highly resistant to staining in day-to-day use and from chemical products, making it ideal for use as a kitchen worktop and as a surface for other kinds of work both inside and out.

For general cleaning, we recommend the use of Q-Action with a sponge or a sponge with soft fibres. If you don't have Q-Action, the best option is to use a neutral soap and water.

Cleaning Stubborn Stains

In the case of aggressive stains, either from products that are resistant to normal cleaning agents or because they have remained on the work surface without being removed, we recommend using more specific products such as: solvents (acetone or universal solvent type).

The accompanying table shows the various types of stains with their corresponding cleaning products.

STAIN	CLEANING PRODUCT
Grease and Oil	Alkaline detergent / solvent
Ink	Solvent
Rust	Acid
Limescale	Acid
Wine	Alkaline detergent / acid
Tyre Rubber	Solvent
Ice Cream	Alkaline detergent
Resin / nail varnish	Solvent
Coffee	Alkaline detergent / acid
Candle Wax	Solvent
Residual cement	Acid
Epoxy adhesive and grouting	Solvent
Cola	Oxidant
Fruit juices	Oxidant
Tar	Solvent
Nicotine	Solvent / oxidant

Acid cleaning products can include any product that contains acid or descaling agent etc. Alkaline products include basic cleaning agents, ammonia etc.

Solvents can include products such as universal solvent, white spirit, acetone, alcohol etc. oxidants include products such as hydrogen peroxide and diluted bleach.

Prevention of knocks

Although Dekton is an extremely resistant surface, knocks should be avoided in areas which are more exposed (corners, edges, bevels etc).

Precautions

- Avoid the direct contact with metal parts of electric broiler, cooking worktops or ovens that, in a bad installation get directly in contact with the material.
 - Avoid direct radiations in very high temperature such as chimney, barbecues, etc.
 - Avoid direct contact with flame.
 - For Dekton X-Gloss, avoid long contact with industrial objects in very high temperatures.
 - Do not polish the surface.
 - Avoid the use of metal sponges or abrasive particles.
 - Avoid direct cutting on the surface with ceramic knife, as they are a material with similar hardness to the top.
 - For Dekton X-Gloss avoid direct cutting on the surface.
 - Avoid dragging or hitting cooking utensils against worktops of dark colours from the X-Gloss collection, especially Spectra.
- * For Dekton 8mm it is necessary to use protection for hot objects.

For more information, cleaning methods, general maintenance and exposure to chemical substances, please visit www.dekton.co.uk

Performance in Contact with Hot Objects

Recipients such as frying pans, saucepans, casseroles and coffee makers etc. can be placed directly on the work surface after use. Electrical apparatuses which give off heat can also be placed on the unprotected surface. Dekton is designed to withstand utensil temperatures from domestic use. *

In the event of exposure to a chemical not included in this document or the web page, it will be deemed as improper use and will not be covered by the guarantee.

DEKTON® ADVANTAGES

Scratch-Resistant

Dekton® is the most scratch resistant surface on the market and while the slip of a knife won't damage Dekton®.

Due to the intense shine of Dekton® Xgloss, it needs a special maintenance and care. In particular for the darkest colors, like Spectra, whose deep color brings out even the smallest detail.

Stain-Resistant

Because of its low porosity, the new surface Dekton®, is a highly resistant to everyday domestic stains and chemical agents. Even the most stubborn stain such as wine, coffee, ink and rust can be easily cleaned.

Splashes and drops of everyday cleaning products such as bleach or degreasing ovens do not cause any harm to the material.

Low Water Absorption

Dekton® as a reduced water absorption and it is a non-porous material that never needs to be sealed. It naturally prevents liquids and gasses from penetrating the surface, making it a low maintenance surface that is easier to clean.
